The Ω -Axiom: A SI-Consistent Structural Unification of Phase Residuals Ryu Jun-Ho (999)

Independent Structural Physics Laboratory February 14, 2026

Abstract

, π - (Δ) (Residual) . ($\pi_E = 3.4515$), ($\delta = 0.0015$ m), ($\Delta = 0.0047$ m) (g), (c), (Λ) SI .

1 Axiomatic Foundation and Dimensional Constants

Definition 1 (Fundamental Structural Variables) .

- **Modified Equilibrium Phase:** $\pi_E = 3.4515$ (Dimensionless)
- **Structural Spin Gap:** $\delta = 1.5 \times 10^{-3}$ m (Length)
- **Non-attachment Gap (Mismatch):** $\Delta = 4.7 \times 10^{-3}$ m (Length)

Lemma 1 (Spatial Unfolding Index) S_i .

$$S_i = \frac{\pi_E \cdot m}{\delta} = 2301 \quad (1)$$

2 Unified Field Formulation

Theorem 1 (Quantized Residual Gravity) $g \propto \Delta \cdot n \cdot T_{sec} = 1$ s .

$$g = \frac{n \cdot \Delta}{T_{sec}^2} \approx 2086.5 \times 0.0047 \approx 9.80665 \text{ m/s}^2 \quad (2)$$

Theorem 2 (Structural Limit Velocity) $c \propto S_i \cdot \Delta \cdot e^{\pi_E}$.

$$c \approx \Phi \cdot (S_i^2 \cdot \Delta) \cdot e^{\pi_E} \quad (3)$$

Φ SI .

3 Dimensionless Consistency and Cosmology

Lemma 2 (Structural Cosmological Constant) Λ , .

$$\Lambda = \frac{1}{(S_i \delta)^2} = \frac{1}{(\pi_E \cdot m)^2} \approx 0.0839 m^{-2} \tag{4}$$

Theorem 3 (Universal Dimensionless Ratio) .

$$\tilde{E}^2 = \pi_E^2 - \Delta_{dimless}^2 \tag{5}$$

.

4 Conclusion

Ω_- , , 0.0047 m (Δ) .

A Appendix: SI Mapping and Numerical Consistency

$n \approx 2086.5 \pi_E$ SI (m) (s) .

B Appendix: Recovery of 'Incinerated Data'

$\Delta \delta$.
